

People Counter

The COUNT IT People Counter is a bi-directional people counter set. The principle is based on the interruption of a horizontal infrared beam. The transmitter transmits the infrared beam to the receiver. When this infrared beam is interrupted, eg. by a person, the receiver detects this and will increase the count value on the display. Users can choose which count direction is displayed. Because of the innovative use of electronics, the counter can run for approximately 2 years on one set of batteries, without compromising the counting distance.

Specifications

Description	COUNT-IT People Counter
Article number	XA-STPCBI004
Max. counter value	999999 in both directions
Power	1.5V Alkaline batteries
Max. Width	Up to 8 meters
Dimensions	116 * 70 * 26 mm
Material	ABS Black

First direction count

Second direction count
